HoViRe: PLATFORM FOR THE CREATION OF VIRTUAL REALITY CONTENT FOR APPLICATION IN HOSPITAL SETTINGS

A SUPPORT PROGRAMME FOR INNOVATIVE BUSINESS CLUSTERS IN ORDER TO IMPROVE THE COMPETITIVENESS OF SMALL AND MEDIUM-SIZED ENTERPRISES AND THE CALL FOR PROPOSALS FOR THE YEAR 2022, WITHIN THE FRAMEWORK OF THE RECOVERY, TRANSFORMATION AND RESILIENCE PLAN, IS HEREBY LAUNCHED.

GEIE - BIG DATA ANALYTICS and LEAN SIX SIGMA FOR INTEGRATED AND SMART ENERGY MANAGEMENT IN HIGH CONSUMPTION BUILDINGS

THE OBJECTIVE OF THE GEIE PROJECT IS THE DESIGN, DEVELOPMENT AND VALIDATION IN A HOSPITAL ENVIRONMENT OF AN INTELLIGENT AND PREDICTIVE ENERGY MONITORING SYSTEM FOR ENERGY-INTENSIVE BUILDINGS WITH TECHNICALLY COMPLEX AND DIVERSE INSTALLATIONS, SUBJECT TO OPERATIONAL STRESS (365DAYS*24HOURS) BASED ON STATISTICAL AND MASSIVE DATA PROCESSING TECHNIQUES (LEAN SIX SIGMA) AND THE DEVELOPMENT OF INTELLIGENCE ALGORITHMS (BIG DATA ANALYTICS).

Auto Drive

AUTODRIVE 2018-2019

Advisory and technical support to Málaga city council in the autodrive european project. is a project financed by ec&el-joint undertaking and the objective of the project is focused on developing automated driving systems based on semiconductor technologies to increase robustness and active safety in driving through the development of new sensors and control actuators, consolidate systems of cybersecurity, to demonstrate the competitive advantage supposed by these systems to measure to increase the active safety in the automated driving in increasing the acceptance of the final user with respect to this type of driving.

ingho.

HECTOR (EXP-AEI-010500-2018-17) 2018

Project financed by the ministry of industry, trade and tourism, within the framework of the call for projects of support for innovative business groups in order to improve the competitiveness of small and medium-sized enterprises. the project consists of the study, design and validation of a system of water recovery in climatizers for the improvement of the operation in cooling towers in buildings of great consumption.

PROYECTO
DESEHVAC

DESEHVAC (EXP-00082796/ ITC-20151330) 2015-2017

Project within the feder ininterconecta program. the project proposes a solution for air conditioning equipment designed to combat latent load (loads associated with air humidity content). this solution contemplates the use of desiccant materials in liquid state with micrometric particle size, looking for a solution that improves the efficiency of desiccant and is applicable in the area of air conditioning and refrigeration.

SHE (PT-2011-1237-920000) 2011-2013

Project within the innpacto program. the aim of the project was to integrate the different domestic systems into an intelligent network, which allows the end user to control them remotely, as well as making energy saving and efficiency decisions in real time and based on the continuous learning of the installation. within the framework of the project, a prototype was developed that demonstrated how the domestic user could be helped to progressively reduce their energy consumption, while also promoting an adequate and rational use of the available energy resources.

ingho.

INGENIERÍA Y FACILITY MANAGEMENT

RENIA (IPT-120000-2010-26) 2010-2013

Project within the innpacto program, the general objective of the project is the design and development of a computer application for the evaluation, eco-design and environmental communication of solar energy collection equipment used in buildings, solar thermal and photovoltaic installations, this application is designed to help the manufacturers of these systems to identify critical points of their products, study different design strategies that reduce the environmental impact associated with, favor the exchange of information and knowledge among the different agents that participate in the chain of value and enrich the existing environmental databases with specific information for the spanish market. the renia tool is based on the life cycle analysis (lca) methodology.

REDUCA (IDI-20101136) 2009-2012.

Project co-financed by cdti and feder funds. the aim of the reduca project is to advance in the development of new solutions more respectful with the environment for energy rehabilitation in teaching buildings in andalusia. the proposed solutions have been evaluated according to a methodology that allows analyzing, installing and evaluating innovative technologies that guarantee users the optimum quality of the indoor environment while increasing the energy efficiency of these buildings. eco-sustainable values have also been integrated, which will reduce the environmental impact in all stages of production, from the extraction process to the placement on site, and facilitate the full use of the material.
